

Autonomous Mine Training

Complete training solutions for
autonomous technologies

www.ImmersiveTechnologies.com

Immersive Technologies solutions are proven and trusted in the vast majority of autonomous mines. Whether you need ramp up or continuous improvement support we have solutions that deliver quantifiable value on any AHS system.

- **REMOVE RISK** and production impact.
- **RAPIDLY** and effectively transition workforces to be autonomous ready.
- **QUANTIFIABLE RESULTS** with proven behaviour optimization.

Autonomous Mine Training

Complete training solutions for autonomous technologies

REAL RESULTS

5% Improvement in Autonomous Truck Cycle time

6% Improvement in Autonomous Truck Interchange time

20% Improvement in Autonomous Truck Queue time

Automation within the mining industry is transforming the nature of work performed by people both within the mine site and in the back office. Often, the importance of the role of the person working within autonomous operations is underestimated, particularly their ability to compensate for the unexpected. This underestimation can dilute or negate the benefits achievable from running an autonomous operation. Therefore, selecting the right people, effective training and upskilling strategies are key to ensuring a highly efficient autonomous operation.

User Performance

Human errors within an autonomous operation can impact:

- Production rates
- Safety
- Operational costs

Training Approach

Our program addresses multiple learning styles through blended learning. Training records and assessments are tracked and stored for proof of training.

Systematic & Tailored Approach

Advanced Simulation provides the ultimate in learning by doing with skills gained transferring directly to the field.

Safety

- Train and assess safe interaction with autonomous equipment and systems.
- Reduce risk to people, property and equipment while training in a simulated environment.

Throughput

- Train a large number of people effectively in a short period of time.
- Reduce in-field training time through the use of simulation.

Productivity

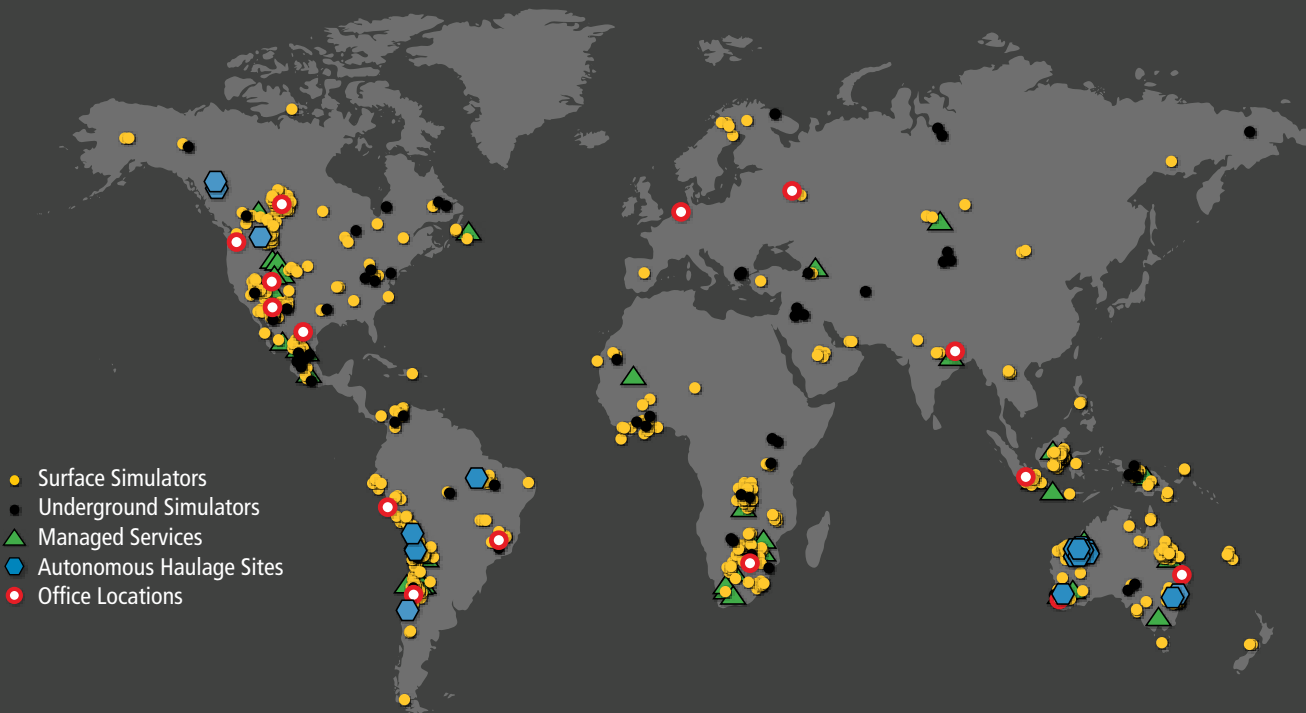

- Decrease human errors, common in the use of new autonomous systems.
- Consistently measure, assess and optimize the skills of critical roles, in a safe environment without disrupting production.
- Reduce human performance variability.

EXPERIENCE MATTERS

ALL MAKES ALL MODELS

Deployed in 20+ Autonomous Mines

- Surface Simulators
- Underground Simulators
- ▲ Managed Services
- ⬢ Autonomous Haulage Sites
- Office Locations
